EE24BTECH11052 - RONGALI CHARAN

Question: The area of the region bounded by the curve $y = \sqrt{16 - x^2}$ and x-axis is

- 1) 8π sq units
- 2) 20π sq units
- 3) 16π sq units
- 4) 256π sq units

Solution: The equation of conic g(x) is given by :

$$g(x) = \mathbf{x}^{\mathsf{T}} \mathbf{V} \mathbf{x} + 2\mathbf{u}^{\mathsf{T}} \mathbf{x} + f = 0 \tag{4.1}$$

$$\mathbf{V} = \begin{pmatrix} 1 & 0 \\ 0 & 1 \end{pmatrix} \tag{4.2}$$

$$\mathbf{u} = \begin{pmatrix} 0 \\ 0 \end{pmatrix} \tag{4.3}$$

$$f = -16 \tag{4.4}$$

$$L: \mathbf{x} = \mathbf{h} + k\mathbf{m} \tag{4.5}$$

$$\mathbf{h} = \begin{pmatrix} x \\ 0 \end{pmatrix} \tag{4.6}$$

$$\mathbf{m} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \tag{4.7}$$

$$\mathbf{x_i} = \mathbf{h} + k_i \mathbf{m} \tag{4.8}$$

$$k_1 = \frac{1}{\mathbf{m}^{\top} \mathbf{V} \mathbf{m}} \left(-m^{\top} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) + \sqrt{\left[\mathbf{m}^{\top} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) \right]^2 - g(\mathbf{h}) \left(\mathbf{m}^{\top} \mathbf{V} \mathbf{m} \right)} \right) = -x + 4$$

$$(4.9)$$

$$k_2 = \frac{1}{\mathbf{m}^{\top} \mathbf{V} \mathbf{m}} \left(-m^{\top} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) - \sqrt{\left[\mathbf{m}^{\top} \left(\mathbf{V} \mathbf{h} + \mathbf{u} \right) \right]^2 - g(\mathbf{h}) \left(\mathbf{m}^{\top} \mathbf{V} \mathbf{m} \right)} \right) = -x - 4$$
 (4.10)

$$\mathbf{x_1} = \begin{pmatrix} 4 \\ 0 \end{pmatrix} \tag{4.11}$$

$$\mathbf{x}_2 = \begin{pmatrix} -4\\0 \end{pmatrix} \tag{4.12}$$

The area bounded by the curve $y = \sqrt{16 - x^2}$ and x-axis is given by:

$$\int_{-4}^{4} \left(\sqrt{16 - x^2}\right) dx = 8\pi \tag{4.13}$$

Hence, the area bounded by the curve and the line is 8π sq units.
